tickets

PK	ticket_id	SERIAL
FK	movie_id	SERIAL
FK	conc_id	SERIAIL
FK	cust_mov_id	SERIAL

I chose to create the ERD like this for the movie theater because...

There may be a customer who orders a ticket, but they could order another ticket for thier friend or partner, assuming that the one customer will be paying for everything. There can also be just one customer under one ticket individually.

Under each ticket and only one ticket there will be the movie_id and conc_id stating the movie they will be seeing and concessions if they buy some or not.
